

Mobility Pulse | MSP

2025 V1.2 [EN]

What is Mobility Pulse as an MSP and what exactly does it do?

Mobility Pulse is an electric mobility service provider (eMSP) offering charging services for electric cars. Our main objective is to facilitate the search and use of charging stations for electric vehicle drivers.

- Access to Europe's largest charging network**
- Complete transaction management and reporting**
- Roaming service, available autonomously**

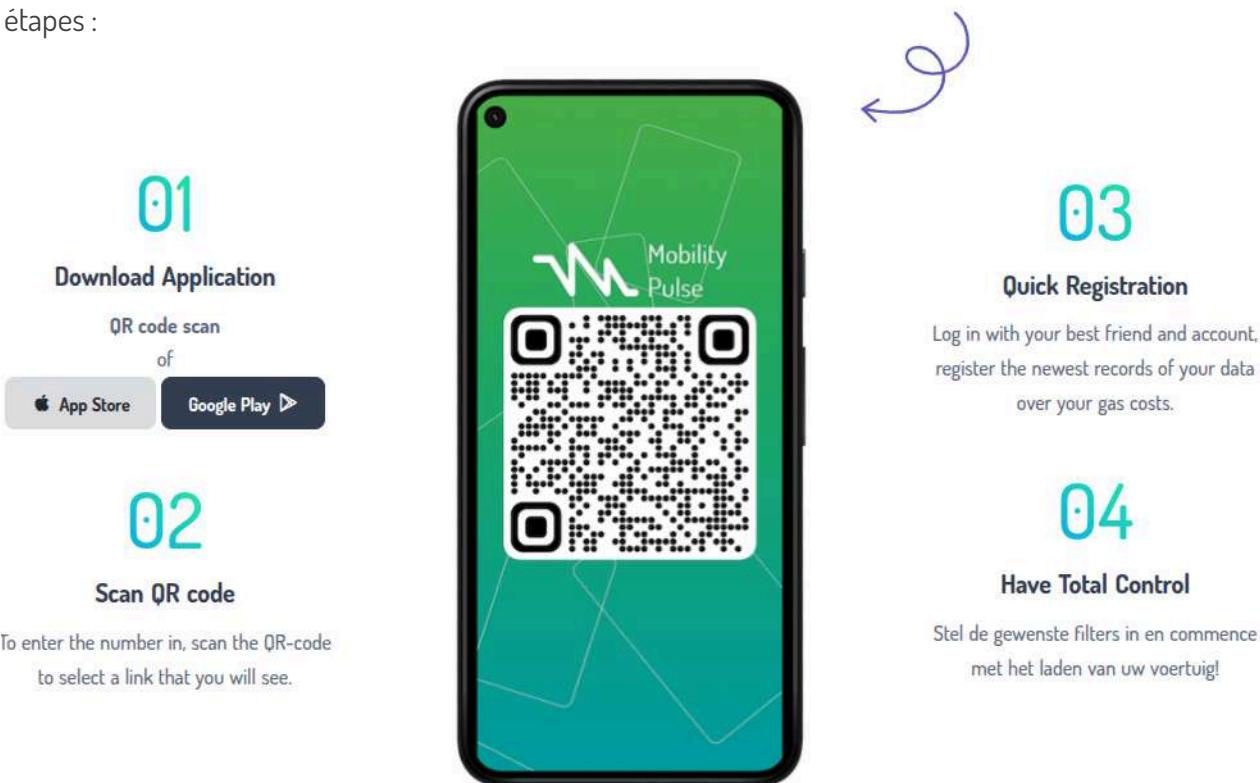

Whether you want to develop your brand's charging experience or expand your presence in Europe, we give e-mobility service providers the tools they need to win.

Here are our main responsibilities as an MSP:

- Network access:** We offer access to a vast network of charging stations, often via roaming agreements with CPOs.
- User-friendly application:** Provide a mobile application where users can find charging stations, start/stop charging sessions, and view their charging history.
- Payments:** We process payments for charging sessions and ensure correct billing.
- Customer service:** We offer assistance to electric vehicle drivers in case of questions or problems.

Mobility Pulse charging application.

Votre assistant personnel pour recharger votre voiture électrique en public.. L'application Mobility Pulse vous donne accès à plus de 900 000 bornes de recharge dans 22 pays. Commencez à recharger votre véhicule en seulement trois étapes :
